

DR. KALPANA MADHAVAN | Dentist

Award-winning, Ivy League-educated dentist, Dr. Kalpana Madhavan has a wide range of experience from implants to CAD-CAM Ceramic technology to invisible braces and has been in dentistry for over 18 years.

A naturalist and minimalistic dentist, she is passionate about saving every element of a tooth rather than over-treating it. "I strongly believe that tooth enamel is more precious than diamonds and once gone can never be brought back!" she says.

Her office has digital, laser and CAD-CAM technology making single visit dentistry a reality. A patient coming in with a broken tooth can walk out with a brand new tooth-colored ceramic filling or crown in a matter of 2-3 hours, thus reducing number of revisits, no temporaries and best of all no extra shots. Patients are awe-struck when they actually see their own new filling getting milled by a robotic milling machine! "I love to use cutting edge technology to deliver 'Do it once, Do it right dentistry' " says Dr. Madhavan.

She is a big proponent of women's health and uses her gum surgery background to prevent as well as control gum and bone related dental issues. She is among the few dentists in the country who has full time additional training in very precise implant dentistry. She is an eco-friendly "Green Dentist" who has her entire office set to be almost paperless and has minimized chemical use wherever possible.

Dr. Madhavan has received a long list of industry awards and is one of "America's Top Dentists" for 2009. She is also a Dental Expert for "A New Me" interviews for the WUSA Channel 9 TV!

Dr. Madhavan earned her master's degree in periodontics in 1998, completed her fellowship in implantology from Boston University, and earned her dentistry degree from the University of Pennsylvania.
